Hot Lab 67m Explorer by VSY

Active in Milan since 2004, Hot Lab was created by three young partners: Antonio Romano, Michele Dragoni and Enrico Lumini. Coming from design, automotive design and architecture respectively, this dynamic partnership promptly put itself to the test, developing projects that stand out for their painstaking formal research, sober and elegant styling, and the benefits to the well-known naval shipyards and refined owners who are accompanied and advised through the entire design and construction process of their yacht.

Baglietto 38m and 41m V-Line

Both yachts are characterised by a remarkable amount of space and volume, notably in the social areas, indoor and outdoor alike. The sundeck and the swimming platform are both significant examples of such an efficient usage of space.

The 41m sundeck includes a comfortable bar in the forward part, in addition to two seating and sunbathing areas, and offers a 360° view. The stern area is primarily a beach club and is equipped with a proper gym and a steam shower.

67m explorer by VSY

Conceived in accordance with the original explorer yacht concept, yet features all the characteristics of a modern and absolutely contemporary yacht. The yacht's overall appearance features the typical superstructure of working boats (whether oceanographic, cable layers or fishing boats) positioned well forward, thus leaving large open spaces aft. The classic bow, instead of the widespread vertical plumb bows, as well as the wheelhouse wing stations, suggest a highly marine and faithful design approach to working boats and naval ships.
