COLUMBUS YACHTS\_47-METER CROSSOVER

Columbus Yachts has announced the sale of the first 47-metre Crossover to a European client. Designed to be built in steel with aluminium superstructures, its maximum beam is 8.60 m and it will have a 3 m maximum draught. The exterior lines are by the Hydro Tec studio, which handled naval engineering together with the shipyard, whilst the interiors are by Hot Lab. It boasts a perfectly optimized, proven naval platform that already forms the basis of another 42-meter model under construction. The Columbus Crossover 47 is a perfect example of flexibility and functionality, designed to maximize on-board

comfort and enhance every space. The stern, equipped to accommodate a tender weighing up to 3000 kg, can be transformed into an oasis for relaxation, with a Jacuzzi, sunbathing area and direct access to the sea, with folding gunwales that expand the usable surface area. The exterior is characterized by modern, muscular shapes, with the concentration of volumes in the bow area, a typical feature of explorers. The layout is designed to accommodate up to 12 people, with four cabins positioned below deck and a full-beam master cabin on the main deck. The yacht will be delivered in 2027.
